

Methodologies and Tools for Repeatable, Efficient Space Operator Training and Certification

Pat Jameson
Sr Training Systems Engineer

Introduction

- Value Proposition
 - If operations systems are at the heart of every space mission, then efficiently training operators is a key enabler of those operations systems
 - Efficient training is achieved through a streamlined Instructional Systems Design (ISD) process; Systems Engineering Principles; and focused, flexible training development tools
- ISD process
 - Analysis
 - Design
 - Development
 - Implementation
 - Evaluation

Training Process

- Analysis
 - Identify and document what needs to be trained
 - Determine knowledge needed and what tasks are to be performed for each task
- Design
 - Establish Enabling Objectives (EOs) and performance criteria for each task
 - Determine lesson content (i.e. put EOs into lesson groups)
- Development
 - Create lessons to fulfill EOs (classroom, on-line, hands-on, blended)
 - Generate products to support lessons (Instructor Manuals, Student Guides, assessments, etc)
 - Maintain traceability from Tasks -> EOs -> Lessons -> Flows -> Ops Positions
- Implementation
 - Present training materials to students
 - Measure training results vs performance criteria to determine effectiveness
- Evaluation
 - Incorporate performance improvements, student feedback into lessons

Task Analysis Examples and Tools

Controller high-level tasks:

- 1) Monitor assigned Assets
- 2) Control assigned Assets
- 3) Manage ground configuration for assigned Assets
- 4) Respond to anomalous conditions

High Level Tasks

- 1) Monitor assigned Assets
 - a) Identify assigned Assets
 - b) Verify State-of-Health (SOH) of assigned operational or spare Asset
 - i) Perform continuous TLM monitoring and limit checking Asset
 - ii) Perform simultaneous TLM monitoring and limit checking of multiple Assets
 - c) Monitor TTC data recording

Detailed Tasks

Enabling Objectives (EO)

SATCON		Lesson Module		1	2	3	4	5	6	7	8
1	Monitor assigned TDRS	30	Verify State of Health (SOH)	3184	Identify and describe the tools and displays used for verifying TDRS State of Health (SOH) (K)						
		31	Monitor TTC data recording	3182	Identify and describe the tools and displays used for monitoring TTC data recording (K)						
		32	Perform TDRS telemetry trending and performance reporting	3183	Recognize nominal Telemetry, Tracking, and Command (TTC) data recording (K)						
		33	Perform SOH data recording	3185	Recognize nominal TTC data recording (K)						
		34	Operator Work Area	3186	Describe procedures to perform SATCON Work Area handover (K)						

SATCON		Lesson Module		1	2	3	4	5	6	7	8
1	Monitor assigned TDRS	34	Identify assigned TDRS	3184	Demonstrate identifying assigned operational and spare TDRS (P)						
		35	Verify State of Health (SOH) of assigned operational or spare TDRS	3182	Perform continuous telemetry monitoring and limit checking of a single or multiple TDRS (K)						
		36	Monitor TTC data recording	3183	Demonstrate verifying State of Health of assigned operational or spare TDRS (K)						
		37	Perform TDRS telemetry trending and performance reporting	3185	Demonstrate using tools and displays used for monitoring TTC data recording (K)						
		38	Perform SOH data recording	3186	Recognize nominal TTC data recording (K)						
		39	Operator Work Area	3187	Describe procedures to perform SATCON Work Area handover (K)						

Knowledge (K) Enabling Objectives

Performance (P) Enabling Objectives

Lesson / Cert Guides

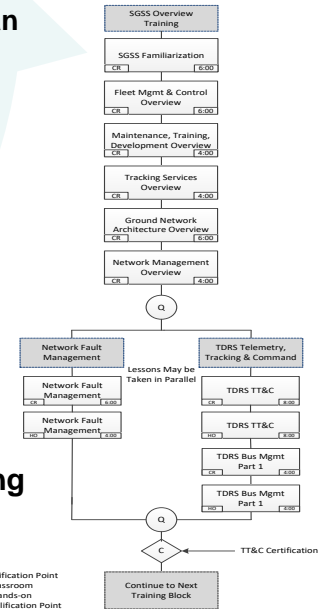

Training Plan

- Training/Cert Approach
- Resources and Phases
- Lesson catalog
- Training flows
- Schedule

Master Objectives Task List (MOTL)

- [Example 1](#)
- [Example 2](#)

C - Certification Point
CR - Classroom
HO - Hands-on
Q - Qualification Point

Position Tasks

Enabling Objectives

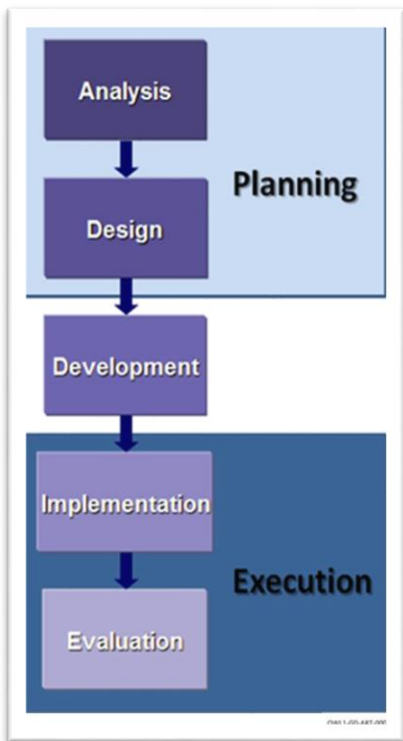

Lesson groups

Training Flows

Lesson / Cert Guides

Training Plan

Training Program Examples

NASA GEO

Training Plan

84 lessons
 - Classroom (CR), 48 (57%)
 - Hands-on (HO), 36 (43%)

CR	HO
204	172

lesson hours developed

2nd TDRS Grnd Terminal

White Sands Grnd Terminal

~250 students, 4 Ops, 9 support positions

Commercial LEO

Training Plan

52 lessons
 - CR 10 (19%)
 - On-line (OL) 24 (46%)
 - HO 18 (35%)

CR	OL	HO
24	58	40

lesson hours developed

USSOC

UKSOC

~150 students, 6 Ops, 2 support positions

Example Training Products

Knowledge Lessons

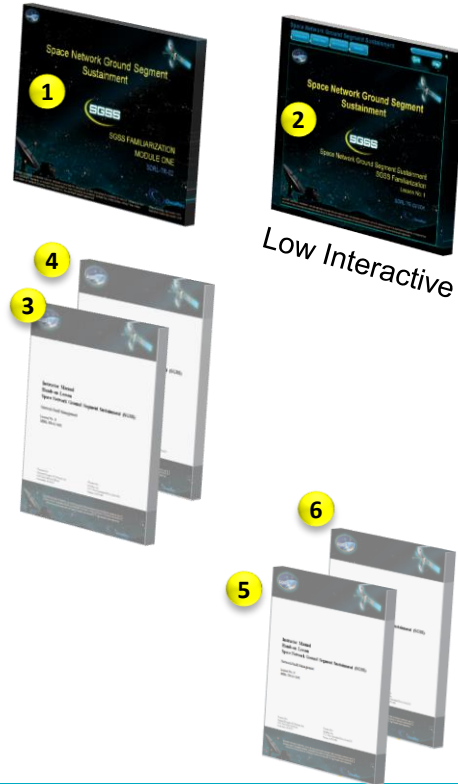

1. Classroom (CR)
2. On-line (OL)
3. Instructor Manual
4. Student Guide

Performance Lessons

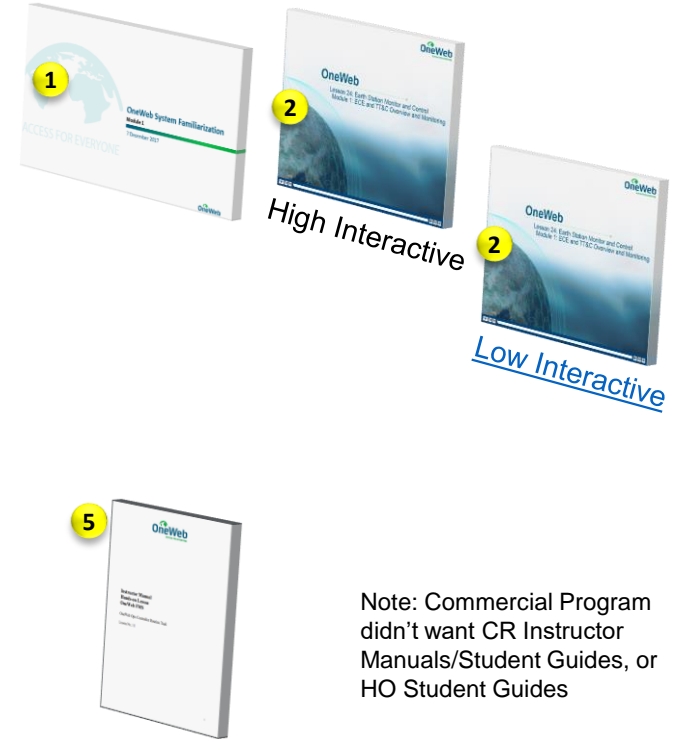

i.e. - Hands-on (HO)

5. Instructor Manual
6. Student Guide

NASA GEO

Commercial LEO

Note: Commercial Program didn't want CR Instructor Manuals/Student Guides, or HO Student Guides

NASA GEO

Classroom Lesson Product Lineage

Classroom Lesson
(.pptx)

- Instructor access only
- Master file
- Wall projection

Instructor Manual
(.pdf)

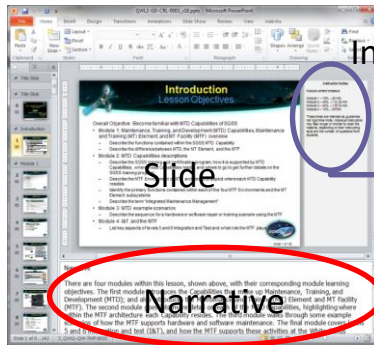

- Instructor access only
- Formatted from Master file
- Annotated, referenced during classroom delivery

Student Guide
(.pdf)

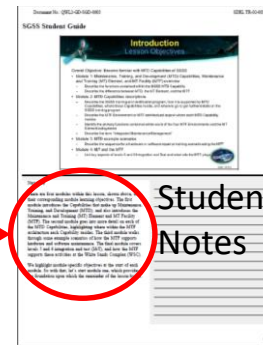

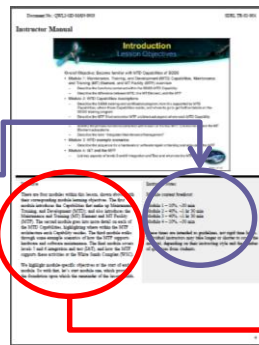

- Student use
- Notes taken during classroom delivery

Instructor Notes

Slide

Narrative

Student Notes

Take Away

- **Proven:** Efficient, and effective training planning, development, and execution processes and tools critical to training and mission success
- **Flexible:** Methodology structures training support to provide a complete program (start to finish), or anywhere along the development continuum
- **Efficient:** Create individual lessons and multiple supporting training products from a master file, or convert existing training material to multiple formats
- **Disciplined:** Use proven methodologies and workflows for consistent, repeatable results
- **Cost Effective:** Implemented by degreed engineers, early in their career, with a demonstrated passion for learning and instructing. Trained in proven methodology, and led by a senior team lead for optimum results.
